Claims

1.   A method for controlling a data link which can be set up between at least two subscribers (A, B), wherein, if required, a trigger is sent by one of the subscribers (A or B), so the data link is automatically set up.

2.   The method as claimed in claim 1, wherein the trigger is end subscriber-based.

3.   The method as claimed in claims 1 and 2, wherein the trigger is constructed as an SMS land-line network message.

4.   The method as claimed in claims 1 to 3, wherein the trigger is network-based.

5.   The method as claimed in any one of the preceding claims, wherein the data link is broad-band.

6.   The method as claimed in any one of the preceding claims, wherein the data link is narrow-band.
